

Cold Finance

V 1.2.0

Introduction

Cold Finance -\$COLD, is an autonomous yield and liquidity generation protocol which is based on BinanceSmart chain.

Token will reward the community by holding the token through the tax from all transactions made.

\$COLD is the main asset that will be used with Cold Finance Protocol. Our project will initially be focused on building our own Decentralized Exchange (DEX) based on BinanceSmart Chain (BEP20). Additional features will be added along the way.

Features

Initial Token Burn

50% of \$COLD token was burned by sending it to the dead address and ownership was renounced. This will permanently decrease the token's supply and increase base value.

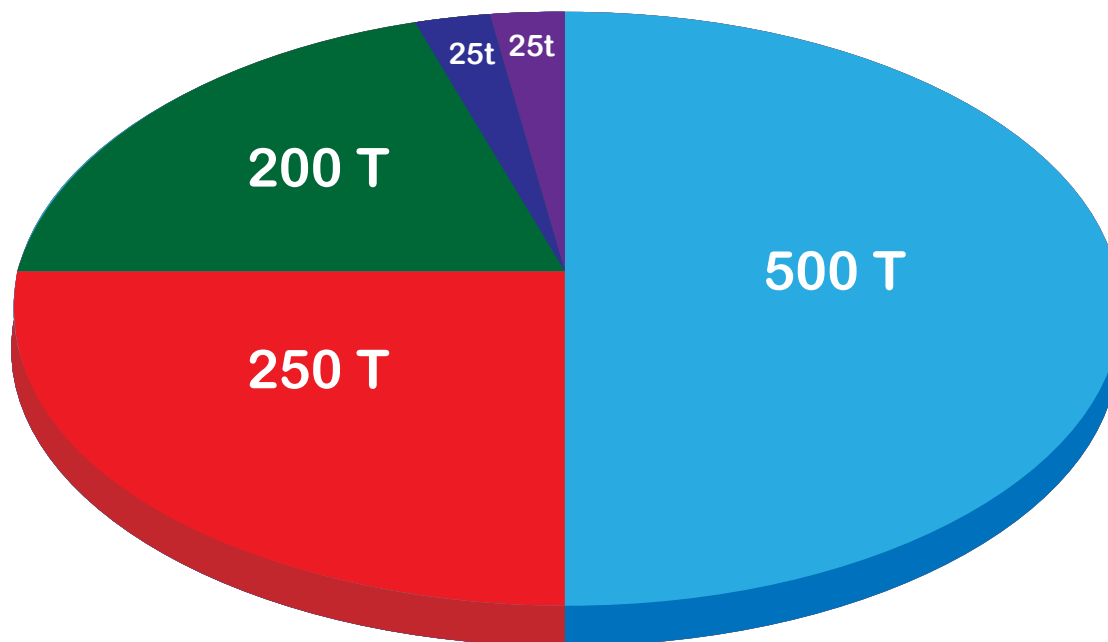

Locked Liquidity

5% of the tax of all transactions made using \$COLD will be permanently locked to liquidity pool, which will contribute to increase the value of the token and lower the volatility of the price.

Reflection

3% of the tax of all transactions made with \$COLD will be split, and distributed to all the holders.

Tokenomics

-  Initial burn
-  Presale
-  Liquidity
-  Marketing
-  Project development

Roadmap

Q1:

- **Presale Launch with Unicrypt**
- **Initial Burn**
- **Whitepaper**
- **Website and Social Media Profile Creation**
- **Community Growth**
- **Initial Marketing Push**

Q2:

- **Blockfolio, CMC & CoinGecko Listing Application**
- **TechrateFULL Contract Audit**
- **Marketing campaign debut**
- **DEX Planning**

Q3:

- **Exchange Listing**
- **Marketing Campaign**
- **DEX Conceptualization**
- **First AMA**

Q4:

- **Initial Marketing Push for DEX**
- **Partnership with Existing and New Tokens**
- **Planning of Additional Features for DEX**
- **Planning of Roadmap for 2022**
